

# AI Employee

Install a reliable digital teammate to handle repeat work with speed, consistency, and control.

## What it is

An AI employee is a software teammate that can take on defined work, follow rules, work across tools, and hand off to people when approval is needed.

Use it for intake, research, scheduling, follow-up, reporting, and other high-volume tasks.

## Why buyers care

- Speed: finish routine work faster.
- Cost: reduce manual effort on repetitive tasks.
- Consistency: same process every time.
- Scale: handle more work without adding the same headcount.

## Best-fit buyers

- Teams that repeat the same work across email, chat, forms, CRM, and calendars.
- Leaders who want automation with approval steps and clear audit trails.
- Businesses that need a dependable presence, not just a chatbot.

## Core pitch

Book a demo, map the work, and launch with clear control.  
Start with one workflow, prove value, then expand across the team.

## Service path

### 1. Discover

Review goals, tools, and top workflows.  
Pick the best first use case.

### 2. Setup

Build the workflow, rules, and handoff points.  
Connect the tools it needs.

### 3. Launch

Test, refine, and launch with support.  
Track results and improve over time.

**Next step: schedule a demo and review the top workflows to automate first.**
